## Education

**New Jersey Institute of Technology** — Newark, NJ
*Bachelor of Science in Computer Science* — *Aug. 2016 – May 2020*

## Experience

**Senior Software Engineer** — Feb. 2023 – Nov. 2025
*TD Securities* — *New York, NY*

- Led full-scope development of Audit Remediation and Performance Optimization initiatives, delivering compliant production systems within tight regulatory deadlines
- Developed high-performance Java 17 data loaders for FRTB regulatory capital reporting, improving ingestion efficiency with 80% test coverage
- Owned Java 8 to Java 17 migration and Swagger 3 upgrade for core Risk & Capital Studio services, remediating critical security vulnerabilities for audit compliance
- Mentored junior engineers and provided code reviews, promoting best practices in maintainability and performance

**Software Engineer** — Nov. 2021 – Feb. 2023
*TD Securities* — *New York, NY*

- Developed and maintained distributed data loader service, automating ingestion of vendor data into HDFS, transforming risk metrics, and aggregating into central information platforms to enhance data accessibility
- Improved reliability and scalability of daily reporting pipelines, enabling faster turnaround of critical financial data
- Led Transform service for risk metric calculations, ensuring codebase quality, facilitating deployments, and onboarding deployments, and onboarding new users to promote consistent usage across teams

**Technology Analyst** — Jul. 2020 – Nov. 2021
*TD Securities* — *New York, NY*

- Completed rotational program across four engineering teams, contributing to production application and supporting monitoring of critical systems
- Delivered production-level code in a diverse environment, gaining exposure to microservices, distributed systems, and financial applications
- Adapted quickly to new teams and technologies, ensuring reliable contributions under strict deadlines

**Technology Intern** — Jun. 2019 – Aug. 2019
*TD Securities* — *New York, NY*

- Created Access Log Service for internal microservice platform to enable cost-center tracking and enhance project funding transparency
- Integrated multi-threading capabilities to Access Log service integrated with TimeScaleDB deployed through TeamCity

## Projects

**Self-Hosted Home lab** | *Docker, Linux, Networking, PostgreSQL, HTTPs, Javascript* — Mar. 2025 – Present

- Built and maintained a self-hosted Linux server infrastructure using Docker to deploy and manage containerized services
- Configured network access and service connectivity to remote and privately hosted applications including a NAS, media server, and photo and video storage solution
- Deployed and maintained game-server infrastructure using custom Docker images and configurations, creating custom experiences to over four different servers to a dozen users with integrated web tooling

## Technical Skills

**Languages**: Java, Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS, Bash
**Frameworks**: JUnit, REST APIs, Microservices, Multithreading, ETL Pipelines, Linux, Distributed Systems
**Developer Tools**: Docker, TeamCity CI/CD, AutoSys, Git, Bitbucket, Jira, IntelliJ, Visual Studio, Veracode Security
